

**THE NEW GREEN REVOLUTION!**

*Elaborazione, introduzione e applicazione di un nuovo protocollo di produzione*

## **PROTOTYPE OF A RECOVERY MACHINE PRODUCT FOR HILLY AREAS**

*Part of the project of products' recovery was the realization of an innovative to use in the hilly areas of Montefalco. The use of a machine for products' recovery is hampered by the hilly nature of the environment (70% of the wine-growing country takes place in hilly areas); moreover the weight , the structure and the dimension of the machine, prevent its utilization in areas with steep slopes.*

### THE NEW GREEN REVOLUTION!

*Elaborazione, introduzione e applicazione di un nuovo protocollo di produzione*

*The project called GREEN NEW REVOLUTION has developed a prototype of recovery machine, which can overcome all difficulties above said.*

*The project that we wanted to pursue included three phases:*

- *Use of the best technology available on the market;*
- *Study of an adaptation's machine system to hilly areas;*
- *Creation of a self-leveling machine, less heavy and bulky.*

*The prototype was completed in 2012 and was presented at "THE GREEN ECONOMY WINE –territory, innovation, quality, sustainability" that took place in Montefalco the 14th September 2012. It is expected that the prototype's use will determine in 3 years the reduction of over 30% of the consumption of plants' protection products, reducing in this way possible products' falls to the floor and accordingly the environmental impact.*
